#### **GENERAL INFORMATION**

#### **Product Description for Equipment under Test (EUT)**

| Product                     | Commercial Induction Range |
|-----------------------------|----------------------------|
| Model                       | WIH400B                    |
| Voltage Range               | AC 208V/60Hz,AC 240V/60Hz  |
| Highest operating frequency | 28 kHz                     |
| Maximum power               | 2900Watts,3300Watts        |
| Date of Test                | 2019/06/14~2019/06/17      |
| Sample serial number        | 190530551                  |
| Received date               | 2019/05/30                 |
| Sample/EUT Status           | Good condition             |

Report No.: RSZ190530551-00

# **Objective**

This report is prepared on behalf of *Continental Conair Limited* in accordance with Part 2-Subpart J, and Part 18-Subparts A, B and C of the Federal Communication Commissions rules and regulations.

The objective of the manufacturer is to determine compliance with FCC Part 18 limits.

This is a CIIPC application of the device, the difference between the original device and the current one described as following:

1. Changed the PCB board, no other change.

Based on the change made to the device, all the test items were performed.

#### Related Submittal(s)/Grant(s)

No related submittal(s).

# **Test Methodology**

All measurements contained in this report were conducted with MP-5, FCC Methods of Measurements of Radio Noise Emissions from ISM Equipment, February 1986. All measurements were performed at Bay Area Compliance Laboratory Corporation. The radiated testing was performed at an antenna-to-EUT distance of 3 meters.

FCC Part 18 Page 3 of 15

#### **Measurement Uncertainty**

| Parameter             |            | uncertainty |
|-----------------------|------------|-------------|
| Conducted Emissions   |            | ±1.95dB     |
| Radiated<br>Emissions | Below 1GHz | ±4.75dB     |

Note: Otherwise required by the applicant or Product Regulations, Decision Rule in this report did not consider the uncertainty.

Report No.: RSZ190530551-00

## **Test Facility**

The Test site used by Bay Area Compliance Laboratories Corp. (Shenzhen) to collect test data is located on the 6/F., West Wing, Third Phase of Wanli Industrial Building, Shihua Road, Futian Free Trade Zone, Shenzhen, Guangdong, China.

The test site has been approved by the FCC under the KDB 974614 D01 and is listed in the FCC Public Access Link (PAL) database, FCC Registration No.: 342867, the FCC Designation No.: CN1221.

The test site has been registered with ISED Canada under ISED Canada Registration Number 3062B.

FCC Part 18 Page 4 of 15

# OPERATING CONDITION/TEST CONFIGURATION

#### **Justification**

The EUT was operated at maximum (continuous) RF output power.

Note: Two different voltage and power support with device, only test with the high voltage and high power for worst case.

Report No.: RSZ190530551-00

#### **EUT Exercise Software**

No exercise software was used.

#### **Special Accessories**

No special accessory was used.

## **Equipment Modifications**

No modifications were made to the EUT tested.

# **Support Equipment List and Details**

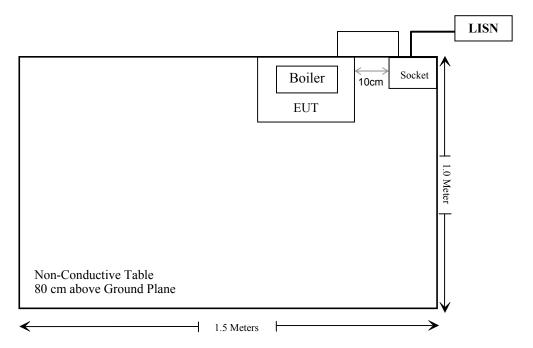

| Manufacturer | Description | Description Model |     |
|--------------|-------------|-------------------|-----|
| N/A          | Socket      | N/A               | N/A |

## **External Cable List and Details**

| Cable Description                  | Length (m) | From/Port | То     |
|------------------------------------|------------|-----------|--------|
| Un-shielded Un-detachable AC Cable | 1.0        | LISN      | Socket |
| Un-shielded Un-detachable AC Cable | 1.2        | Socket    | EUT    |

Report No.: RSZ190530551-00

FCC Part 18 Page 8 of 15

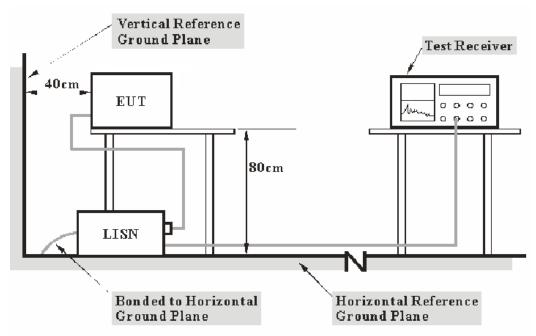

<sup>\*</sup> Statement of Traceability: Bay Area Compliance Laboratories Corp. (Shenzhen) attests that all calibrations have been performed in accordance to requirements that traceable to National Primary Standards and International System of Units (SI).

# **CONDUCTED EMISSIONS**

# **Applicable Standard**

FCC §18.307

#### **EUT Setup**

Report No.: RSZ190530551-00

Note: 1. Support units were connected to second LISN.

2. Both of LISNs (AMN) 80 cm from EUT and at the least 80 cm from other units and other metal planes support units.

The setup of EUT is according with MP-5: 1986 measurement procedure. Specification used was with the FCC Part 18.

The socket was connected to a 240 VAC/ 60Hz power source.

# **EMI Test Receiver Setup**

The EMI test receiver was set to investigate the spectrum from 9 kHz to 30 MHz.

During the conducted emission test, the EMI test receiver was set with the following configurations:

| Frequency Range  | IF B/W |
|------------------|--------|
| 9 kHz – 150 kHz  | 200 Hz |
| 150 kHz – 30 MHz | 9 kHz  |

FCC Part 18 Page 9 of 15

#### **Test Procedure**

Maximizing procedure was performed on the six (6) highest emissions of the EUT.

All final data was recorded in the Quasi-peak and average detection mode.

## **Test Results Summary**

According to the recorded data in following table, the EUT complied with the FCC PART 18,

Refer to CISPR16-4-2:2011 and CISPR 16-4-1:2009, the measured level complies with the limit if

$$L_{\rm m} + U_{(L{\rm m})} \leq L_{\rm lim} + U_{\rm cispr}$$

Report No.: RSZ190530551-00

In BACL.,  $U_{(Lm)}$  is less than  $U_{cispr}$ , if  $L_m$  is less than  $L_{lim}$ , it implies that the EUT complies with the limit.

#### **Test Data**

#### **Environmental Conditions**

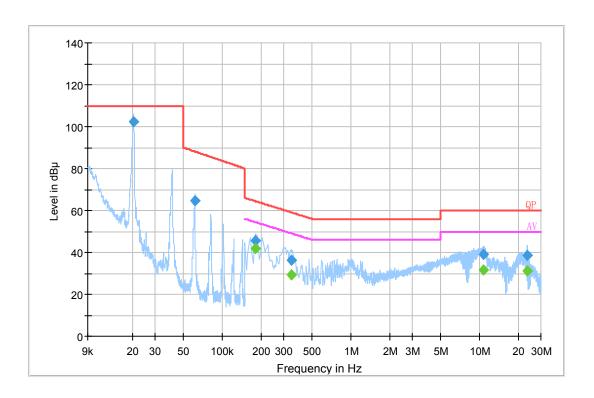

| Temperature:       | 25 ℃      |
|--------------------|-----------|
| Relative Humidity: | 50 %      |
| ATM Pressure:      | 101.0 kPa |

The testing was performed by Haiguo Li on 2019-06-17.

EUT operation mode: Max power

#### Note:

- Corrected Amplitude = Reading + Correction Factor
  Correction Factor = LISN VDF + Cable Loss + Transient Limiter Attenuation
  Margin = Limit Corrected Amplitude

FCC Part 18 Page 12 of 15

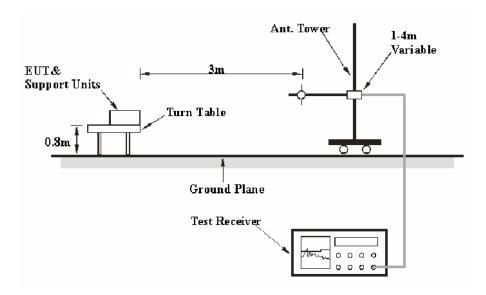

# **RADIATED EMISSIONS**

# **Applicable Standard**

FCC §18.305 and FCC §18.309

#### **EUT Setup**

#### **Below 1GHz:**

Report No.: RSZ190530551-00

The radiated emission tests were performed in the 3 meters chamber test site, using the setup accordance with the FCC MP - 5. The specification used was the FCC part 18 limits.

The socket was connected to 240 VAC/60 Hz power source.

#### **EMI Test Receiver Setup and Spectrum Analyzer Setup**

The system was investigated from 9 kHz to 30MHz.

During the radiated emission test, the EMI test receiver and Spectrum Analyzer were set with the following configurations:

| Frequency Range  | RBW    | Video B/W | IF B/W | Detector |
|------------------|--------|-----------|--------|----------|
| 9 kHz – 150 kHz  | 200 Hz | 1 kHz     | 200 Hz | QP       |
| 150 kHz – 30 MHz | 9 kHz  | 30 kHz    | 9 kHz  | QP       |

## **Test Procedure**

Maximizing procedure was performed on the six (6) highest emissions to ensure that the EUT complied with all installation combinations.

The EUT was in the normal (naïve) operating mode during the final qualification test to represent the worst results.

FCC Part 18 Page 13 of 15

#### **Corrected Amplitude & Margin Calculation**

The Corrected Amplitude is calculated by adding the Antenna Factor and Cable Loss, and subtracting the Amplifier Gain from the Meter Reading. The basic equation is as follows:

Report No.: RSZ190530551-00

Corrected Amplitude = Meter Reading + Antenna Factor + Cable Loss - Amplifier Gain

The "Margin" column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 7dB means the emission is 7dB below the limit. The equation for margin calculation is as follows:

Margin = Limit – Corrected Amplitude

## **Test Results Summary**

According to the data in the following table, the EUT complied with the FCC Part 18,

Refer to CISPR16-4-2:2011 and CISPR 16-4-1:2009, the measured level complies with the limit if

$$L_{\rm m} + U_{(L{\rm m})} \leq L_{\rm lim} + U_{\rm cispr}$$

In BACL.,  $U_{(Lm)}$  is less than  $U_{cispr}$ , if  $L_m$  is less than  $L_{lim}$ , it implies that the EUT complies with the limit.

#### **Test Data and Plots**

#### **Environmental Conditions**

| Temperature:       | 25 ℃      |
|--------------------|-----------|
| Relative Humidity: | 52 %      |
| ATM Pressure:      | 101.0 kPa |

The testing was performed by Baston Chen on 2019-06-14.

EUT operation mode: Max power
